

## APPENDIX B

---

### Emergency Discharge Sites

*See notes in Section 4.1 regarding the potential need to modify / augment over-pumping sites to deal with future flood events. Over-pumping sites will be selected to provide the most effective arrangements to maintain services, whilst minimising environmental effects. Where practical, sites that have been used previously are expected to be re-used (when necessary), but the use of different locations cannot be ruled out, if hydraulic conditions dictate.*

King's Somborne, Hampshire - Overpumping and Tankering Sites (Plan 1 of 1)

**Timing for Deployment of Tankers and Overpumps in previous winters**

Location	Tankering			Overpumping		
	Start Date	Stop Date	Typical Number of Tankers	Start Date	Stop Date	Typical Number of Pumps
King's Somborne	03/02/14	11/02/14	2 to 3 tankers	06/03/14	27/06/2014	1

Note: There was a period of excessive flooding between when tankering stopped and over-pumping commenced in the winter of 2013/14. Manholes were so inundated with water that both tankering and over-pumping would have been ineffective.

Neither tankering or over-pumping were required in 2019/20 or 2020/21.
